

# IT'S WHAT YOU CAN'T SEE THAT OFTEN PRESENTS THE BIGGEST RISK TO HOMEOWNERS

Specify a **3rd party processor certificate** for steel reinforcement. It's the only way to guarantee the quality and performance of reinforcing steel in your footing system.

Over 140,000 tonnes of steel reinforcement is supplied in our market each year from unknown origins.

That's why the Steel Reinforcement Institute of Australia requires all members to hold a current JAS-ANZ accredited 3rd party processor certificate to prove their steel reinforcement conforms to AS/NZS 4671.

Insert this specification in your drawings to guarantee steel reinforcement quality:

**FOOTINGS AND SLABS**  
A JAS-ANZ accredited 3rd party processor certificate (ACRS or equivalent) must be supplied with all steel reinforcement at procurement, before any concrete is placed, to guarantee conformance of the reinforcement to AS/NZS 4671.

IT'S A SMALL DETAIL THAT PROVIDES BIG  
PEACE OF MIND... FOR EVERYONE
